

Nature Trail

Let's get out and exploring your surrounding area, maybe a walk, local park or woodland or even in your garden

What you can find? Have a look if you can spot anything from the list below

- **Trees** - big tree, one with unusual leaves, hollowed trunks, or interesting bark
- **Logs or large stones** - these are ideal for finding minibeasts. Look underneath, **make sure you** lift and replace the stone or log carefully as not to harm the creatures you find. What did you find?
- **A flower, flowering shrub, or berries** - look out for more unusual flowers, look on the ground, on bushes and trees, what did you find?
- **An animal's shelter** - Can you spot a Birds Nest, mouse tunnel?
- **Fungi** - Look at the bases of trees and rotting wood for any toadstools. **Don't touch** as some fungi can be very poisonous.
- **Different wildlife** - Butterfly, Little Birds, Big Birds, Squirrels etc... or did you spot something different?
